

Voting + Racial Justice History Resource Guide

How To Use This Resource:

The complicated legacy of voting in the United States is a useful lens for understanding the evolution of systemic racism throughout history. The resources in this document are organized to provide an overview of this history. The overall history has broken up into key three periods. The key below provides an explanation for these three groupings:

1. Racism + Voting in Early US History (1619-1776-1877)

- In this time period, we can identify the roots of voter suppression by studying how and why Black Americans and others were explicitly excluded from voting by law. This period starts with 1619, which was the date that the first enslaved Africans were brought to the United States, as well as 1776, when the signing of the Declaration of Independence made voting legal for all white men with property. This period also includes Reconstruction, which was an important moment in the history of Black electoral power. Reconstruction (1863-1877), the period directly following the Civil War, was the first time Black men could vote with the passing of the 15th amendment. Over 2000 Black men won elections and held office.

2. Voting in the Age of Jim Crow (1880-1965)

- After Reconstruction, white people organized to restore racial hierarchy. In this period, we see white lawmakers make new methods to restrict the Black vote. The end of Reconstruction in 1880 marks the rise of Jim Crow, a time when racist lawmakers passed laws to segregate and criminalize Black people in every aspect of life. In the Jim Crow South, white politicians and racial terrorist groups like the Ku Klux Klan collaborated to ensure that Black people could not vote. However, racist voter suppression was not limited to the South: across the country, white politicians targeted Black people by passing laws which disenfranchised those convicted of a crime. This period ends with the passage of the Civil Rights Act in 1965, which gave the federal government tools to ensure that Southern states could not restrict Black people from voting.

3. Current Issues in Voting (1965-Present)

- Historians refer to the period following the Civil Rights Movement (1954-1968), when Black people organized to fight segregation and win formal equality under law, as the “Colorblind Era.” In our current Colorblind Era, structural racism maintains and evolves without the passage of explicitly racist policies. This process is especially evident in the issue of voter suppression, wherein politicians place barriers to voting that target Black voters, poor voters, and other oppressed groups *without using explicit racial language or justification*. This time period marks the rise of Mass Incarceration, in which Black people have been targeted for arrest, imprisonment, and resulting disenfranchisement. Additionally, voting access has been restricted in the last 5 years following the Supreme Court’s *Shelby County v. Holder* decision, which weakened the Federal government’s ability to force states to make voting accessible.
